

Calculator

Apex

```
public class CalculatorController {
    public Integer num1 { get; set; }
    public Integer num2 { get; set; }
    public String result { get; set; }

    public void add() {
        result = 'Addition: ' + (num1 + num2);
    }

    public void subtract() {
        result = 'Subtraction: ' + (num1 - num2);
    }

    public void multiply() {
        result = 'Multiplication: ' + (num1 * num2);
    }

    public void divide() {
        if (num2 != 0)
            result = 'Division: ' + Decimal.valueOf(num1) / Decimal.valueOf(num2);
        else
            result = 'Cannot divide by zero!';
    }
}
```

Visualforce pages

```
<apex:page controller="CalculatorController">
    <style>
        .container {
            width: 400px;
            margin: 50px auto;
            padding: 20px;
            border: 2px solid #ccc;
            border-radius: 10px;
            text-align: center;
            font-family: Arial;
        }
        input[type="text"] {
            width: 80%;
            padding: 10px;
            font-size: 16px;
            margin-bottom: 10px;
        }
        .buttonStyle {
            padding: 10px 20px;
            font-size: 16px;
            margin: 5px;
        }
        .result {
```

```

        font-size: 18px;
        margin-top: 20px;
        font-weight: bold;
    }
</style>
